

Maintenance Management

The prime objective of this system is to provide analytical information to ensure smooth running of all the machineries and equipments in different departments so that individual machine may deliver required quality and productivity with optimum use of maintenance budget.

In a spinning industry there is a separate maintenance department that takes care of machinery and equipment maintenance right from blow Room to winding and packaging

Functionalities:

Maintenance Schedule

- **Schedule Master**
 - Activity
 - Checklist
 - Wire Types
 - Arbour Set Creation
 - Cots Set Creation
 - Action List
 - Material Testing
 - Characteristics Master
- **Schedule Preparation**
 - Specific Schedule Linking
 - Activity Scheduling
 - Wire Grinding Schedule Creation
 - Wire Linking

Data Recording

- **Pascal Recording**
 - Pascal Position
 - Pascal Detail

Air Leakage Recording

- Mast
- Detail

Machine Settings Detail

Maintenance Activities

- Create New Instruction
- List of Instructions
- Register Activity
- Check List of Maintenance Activities
- Instructive Maintenance Activities

Other Activities

- Trial Details
- Service Engineer Visit Details
- Incoming Material Testing
- Workshop Jobs

Sub-Store Management

- Indent Creation
- Item Requisition
- Item Issue To Machine
- Return Scrap Items
- Issue For Repairing
- Received After Repairing

Finder

- Vendor Queries And Suggestions
